

About Sqrock it solutions

Sqrock IT Solutions is an emerging IT company focused on providing practical learning and real-world industry exposure to students and freshers. Our goal is to help students improve their technical, problem-solving, and professional skills through structured task-based internships.

We work in multiple technology domains, such as:

- Web Development

- Frontend & Backend Development
- UI/UX Design
- Python & Data Science
- Digital Marketing
- Software Development

#WEB DEVELOPMENT

Project Phase 1 (First 15 Days)

As part of the internship program, the monthly tasks have now been divided into **15-day project phases** to provide better learning, proper practice time, and structured development experience.

In this phase, students will be given **4 project tasks**, out of which they are required to complete **any 3 projects** successfully within the given deadline.

The purpose of these tasks is to improve practical development skills, project-building experience, problem-solving ability, and portfolio quality through real-world projects.

Task 1: Car Rental Management System

Project Overview

In this project, students need to develop a modern and responsive **car rental management system** website/application. The main purpose of this project is to create a platform where users can view available cars, check rental details, and book cars online easily.

This project will help students understand how real-world business websites work, especially systems related to bookings, listings, forms, and user interaction.

Project Objective

The objective of this task is to improve:

- Frontend development skills
- UI/UX designing skills
- Form handling and validations
- Responsive web design
- Real-world project structure understanding
- Problem-solving and project planning skills

Features to Include

1. Homepage

Create an attractive homepage that introduces the car rental service.

The homepage should include:

- Hero section/banner
- Company introduction
- Featured cars
- Call-to-action buttons
- Clean and professional design

2. Car Listing Section

Display multiple cars with proper details such as:

- Car image
- Car name/model

- Price per day
- Fuel type
- Seating capacity
- Availability status

Students can use dummy/static data or JSON data.

3. Search & Filter Functionality

Users should be able to:

- Search cars by name/model
- Filter cars by price/category/type

This feature can be built using JavaScript or React state management.

4. Car Booking Form

Create a booking form where users can:

- Enter name and contact details
- Select rental dates
- Choose a car
- Submit booking request

Basic form validation should be included.

5. Responsive Design

The complete website/application

ion must work properly on:

- Mobile devices
- Tablets
- Desktop screens

Proper responsive layout and alignment are required.

6. Navigation Bar & Footer

Include a proper

- Navigation menu
- Footer with contact/social links
- Smooth navigation between sections/pages

Technologies Allowed

Students may use:

- HTML
- CSS
- JavaScript
- React.js / Next.js
- Bootstrap / Tailwind CSS
- LocalStorage (Optional)

Bonus Features (Optional)

Students can add extra features for better project quality such as:

- Login/Signup UI
- Dark mode
- Car details page
- Booking history
- LocalStorage data saving
- Animation effects
- Admin dashboard UI

Submission Guidelines

Students must submit:

- Complete source code/project folder
- Project screenshots
- Short explanation/documentation of the project
- GitHub repository link (optional)
- Hosted live link (recommended)

Important Instructions

- The UI should be clean and professional.
 - Avoid copying complete templates from the internet.
 - Proper folder structure and code formatting should be maintained.
 - Students are encouraged to build the project using their own creativity and design ideas.
-

Task 2 — Cafe Website

Project Overview

In this project, students need to design and develop a modern and responsive **cafe website** for a restaurant/cafe business. The website should present the cafe professionally and provide users with information about menu items, services, pricing, and contact details.

The purpose of this project is to help students understand real-world business website development, modern UI design, responsive layouts, and customer-focused website structure.

Project Objective

The objective of this task is to improve:

- Frontend development skills
- Website layout designing
- Responsive web design
- UI/UX understanding
- Component structuring
- Real-world business website development experience

Features to Include

1. Homepage

Create an attractive homepage for the cafe website.

The homepage should include:

- Hero/banner section
- Cafe introduction
- Attractive typography and images
- Call-to-action buttons
- Professional design layout

2. Menu Section

Create a menu section displaying food and beverage items such as:

- Coffee
- Fast food
- Desserts
- Beverages

- Special dishes

Each item should include:

- Image
- Item name
- Short description
- Price

3. About Us Section

Add a section describing the cafe such as:

- Cafe story
- Services
- Environment/experience
- Quality and specialties

4. Contact & Reservation Form

Create a contact/reservation form where users can:

- Enter their name
- Contact details
- Reservation date/time
- Message or special request

Basic form validation should be included.

5. Gallery Section

Add a gallery section with cafe images, food images, or interior design images to make the website visually attractive.

6. Responsive Design

The website must be fully responsive and work properly on:

- Mobile devices
- Tablets
- Desktop screens

7. Navigation Bar & Footer

Include a proper

- Navigation menu
- Footer section
- Social media/contact links
- Smooth navigation between sections/pages

Technologies Allowed

Students may use:

- HTML
- CSS
- JavaScript
- React.js / Next.js
- Bootstrap / Tailwind CSS

Bonus Features (Optional)

Students can add additional features such as:

- Dark mode
- Online food ordering UI
- Customer reviews/testimonials
- Animation effects
- Login/Signup page
- Table booking system
- Image sliders/carousels

Submission Guidelines

Students must submit:

- Complete source code/project folder
 - Project screenshots
 - Short explanation/documentation of the project
 - GitHub repository link (optional)
 - Hosted live link (recommended)
-

Task 3 — Event Booking Platform

Project Overview

In this project, students need to develop a modern and responsive **event booking platform** website/application where users can explore upcoming events, view event details, and book tickets or register online.

This project is based on real-world event management systems used for concerts, seminars, workshops, festivals, and other events. The goal of this project is to help students understand how booking platforms, event listings, and user interaction systems work in practical web development.

Project Objective

The objective of this task is to improve:

- Frontend development skills
- Responsive web designing
- Form handling and validations
- UI/UX understanding
- Dynamic content handling
- Real-world project development experience

Features to Include

1. Homepage

Create an attractive homepage for the event platform.

The homepage should include:

- Hero/banner section
- Featured or upcoming events
- Event categories
- Call-to-action buttons
- Professional and modern design

2. Event Listing Section

Display multiple events with details such as:

- Event image/poster
- Event name
- Date and time
- Venue/location
- Ticket price
- Short description

Students can use static data or JSON data for event information.

3. Event Details Page

Create a detailed event section/page containing:

- Full event information
- Event schedule
- Organizer details
- Venue details
- Registration/ticket information

4. Ticket Booking / Registration Form

Users should be able to:

- Enter name and contact details
- Select number of tickets
- Choose event
- Submit registration/booking request

Basic form validation should be included.

5. Search & Filter Functionality

Users should be able to:

- Search events by name
- Filter events by category/date/type

6. Responsive Design

The complete website/application must work properly on:

- Mobile devices
- Tablets
- Desktop screens

7. Navigation Bar & Footer

Include a proper

- Navigation menu
- Footer section

- Social media/contact links
- Smooth page navigation

Bonus Features (Optional)

Students can add additional features such as:

- Login/Signup UI
- Event countdown timer
- Ticket confirmation page
- Payment UI design
- Event categories page
- Dark mode
- Animation effects
- Admin dashboard UI

Submission Guidelines

Students must submit:

- Complete source code/project folder
 - Project screenshots
 - Short explanation/documentation of the project
 - GitHub repository link (optional)
 - Hosted live link (recommended)
-

Task 4 — Online Examination System

Project Overview

In this project, students need to develop a modern and responsive **online examination system** website/application where users can attend quizzes or exams digitally. The platform should allow students/users to answer questions, submit exams, and view results.

This project is inspired by real-world online exam platforms used by schools, colleges, coaching institutes, and companies for assessments and tests. The main purpose of this project is to help students understand how online testing systems work practically.

Project Objective

The objective of this task is to improve:

- Frontend development skills
- Form handling and validations
- Logical thinking and problem-solving
- Responsive web design
- Dynamic data handling
- Real-world project development experience

Features to Include

1. Homepage

Create an attractive homepage for the examination system.

The homepage should include:

- Hero/banner section
- Platform introduction
- Available exams/quizzes
- Call-to-action buttons
- Professional UI design

2. Exam/Quiz Listing Section

Display multiple exams or quizzes with details such as:

- Exam name
- Subject/category
- Duration
- Total questions
- Difficulty level
- Start button

3. Quiz/Exam Interface

Create an exam interface where users can:

- Attempt multiple-choice questions (MCQs)
- Navigate between questions
- Select answers
- Submit the exam

4. Result Section

After submission, users should be able to view:

- Total score
- Correct/wrong answers
- Percentage/result summary

Students can calculate results using JavaScript logic.

5. Timer Functionality

Add a timer feature for exams/quizzes to simulate a real online examination environment.

6. Responsive Design

The complete website/application must work properly on:

- Mobile devices
- Tablets

- Desktop screens

7. Navigation Bar & Footer

Include a proper

- Navigation menu
- Footer section
- Contact/about links
- Smooth navigation experience

Technologies Allowed

Students may use:

- HTML
- CSS
- JavaScript
- React.js / Next.js
- Bootstrap / Tailwind CSS
- LocalStorage (Optional)

Bonus Features (Optional)

Students can add additional features such as:

- Login/Signup UI
- Dark mode
- Question categories
- Random question generation
- Leaderboard/ranking system
- Exam history
- Admin dashboard UI
- Animation effects

Final Submission Instructions

After completing the selected projects, students are required to:

- Upload all project source code on [GitHub](#)
- Deploy/host the project online and submit the live project link
- Create a professional project post on [LinkedIn](#) explaining the project, technologies used, and learning experience
- Mention project screenshots or demo images in the LinkedIn post
- Tag Srock IT Solutions in the LinkedIn post

Support & Assistance

If any student faces difficulty while understanding or completing the tasks/projects, they can directly contact the internship coordinator/team for guidance and support.

Students are encouraged to ask questions, clear doubts, and communicate properly whenever needed during the project phase.

Thank You & best wishes.

Thank you for being a part of the internship program at Srock IT Solutions.

We hope these projects help you improve your technical skills, creativity, confidence, and practical development experience. Every project you build will help you grow closer to real industry-level development.

Stay consistent, keep learning, and give your best effort in every task.

Best of luck to all interns for Project Phase - 1!

We wish you success in your learning journey and future career.

Best of luck for your internship journey! - Team

Sqrock IT
